

VQA

Mar 10, 2021 - Mar 17, 2021

Status Update

- We performed a resource check of all experiments in case 4.
- All experiments require almost 27 GB of memory and use 90% GPU utilization.

- We create 60 instances to run multiple experiments at the same time.

Status Update

- Almost all experiments in Case 2 first batch are completed.
- All experiments in Case 4 are completed.
- Experiments are added in pipeline as one finishes, so 0 idle time on AWS.

- Installed conda installation of Pytorch using an early access channel. It is expected to be unstable.

https://www.ibm.com/support/knowledgecenter/SS5SF7_1.7.0/navigation/wmlce_install.htm

- Able to install the complete setup on Satori.
 - Not able to start ray successfully.
 - Currently debugging the issue.
-
